Travertine

Quality

Variety

Style

Travertine is among deposited stones category with usually limestone basis. This kind of stone has high porosity so it has less density rather than other stones and as a result its weight is less than other stones. Such characteristics in this kind of stone have made it absorb mortar so much and be used more for façade. Although the stability of this stone is lower than other stones, this weakness is compensated with cutting diameter. Thick travertine stones with special colors and high water absorption may be used both in exterior and interior building floors

Walnut

Traonyx

Traonyx is a combined stone in nature. This stone is one of the most beautiful creation wonders so that marble is combined with travertine in mine veins and two stones material seen in one frame.
